COOKING SAFETY

This system is designed to support individuals during cooking and baking routines. It primarily focuses on technology in the kitchen and creates opportunities for independence without staff in the home.

Who do we consider?

- An individual who cooks meals independently
- An individual who wants to learn basic meal preparation or has a concern about leaving the stove on and burning something
- An individual who has a basic sense of safety and knows how to alert staff if there is a concern or emergency

What will we achieve?

- Cooking meals safely and independently using stove top and oven
- Awareness of safety issues related to stove and oven usage
- Enhanced care management and activities of daily living education
- Reduction of on-site staffing for individuals who can cook/bake

What technology do we use?

- 1 SimplyHome Butler System
- 1 SimplyHome stove sensor
- 1 paging pendant
- 1 motion sensor (needed for rule #4 below)
- 1 smoke detector

What rules can alert staff, family members or the individuals themselves?

1. When the stove is turned on
2. When the stove is turned on for X minutes
3. When the stove is turned on during a certain period of time
4. When the stove is turned on and there is no movement in kitchen for X minutes
5. When the paging pendant is activated (an individual alerting staff to a concern during cooking)
